## Notes:

1. Represents the increase in certified capacity from the prior month's SRECTrade SREC Markets Report
2. CY=Calendar Year, EY=Energy Year. NJ, PA, and DE energy years run from June 1 - May 31
3. Estimated Required Capacity - Current and Next Reporting Year reflects the total capacity that must be running on average throughout the year to meet the solar requirement in that year. Figures based on RPS requirements and SRECTrade estimates. MWhs required are converted to megawatt capacity requirement at a rate of 1,200 MWhs per year per MW. PA estimates take into consideration compliance exemptions through 12/31/10. MA estimates take into consideration impact of the TransCanada settlement.
4. 50% of the OH requirement can come from bordering states. The total MWs reference is for the entire RPS requirement.
5. Total Certified Systems - All PJM Markets - These figures do not equal the sum of total certified capacity and quantity of projects greater than 1 MW due to systems certified in multiple states.
